

55th Anniversary - Honoring Our Journey,
Preparing for Tomorrow

Rejuvenating The Haven

The physical environment plays a vital role in recovery as it promotes healthy living and helps individuals avoid triggers. We pride ourselves on creating a homelike, family-inclusive atmosphere. By modernizing and improving our built environment, we can offer a calmer, more visually appealing space that boosts mental and physical health.

The current state

The Haven's Residential facility has been at the same location since 1977. The main building is from 1943 and we have added other modular buildings and casitas throughout the years. A recent inspection report highlights a need for a series of repairs.

We provide Intensive Outpatient members housing free of charge if the women don't have stable and safe housing in the community. Two of the Recovery Houses are from the mid-twentieth century. The main housing complex is more modern, but the landscaping is very bare.

Our outpatient clinic, admissions, and administration team are located in an office building on Campbell Avenue. The spaces are contemporary, but under continuous, heavy use.

All tree locations would benefit from small repairs, beautification projects, new furniture, as well as art and greenery. The Haven updates its buildings as needed and when funds become available but has had to put many projects on hold due to budgetary constraints.

The Vision

We want to give members hope so that they can envision a brighter future. Instead of thinking “this is good enough,” our goal is to do everything we can to make members feel welcome, respected, and worthy of treatment. By rejuvenating our physical environment, we can improve member experience, safety, and wellbeing.

Add more color

Add more greenery and enhance outdoor areas

Create new murals

Create new Native Ways educational site
